

Binary stars and related mysteries....

Jan J. Eldridge &

Ebraheem Farag, Sohan Ghodla, Ryosuke Hirai

A little binary history....

- Bohdan Paczyński did everything in the 70-80s on binaries.
- Everyone forgot this, a weird situation occurred:
 - For low mass stars and type Ia supernovae binaries were important.
 - For massive stars all were single stars and stellar winds and rotation only important.
- The people like Dany Vanbeverem started reminding everyone about binaries from 90s onwards.
- Then in 2000s with Elizabeth Stanway, I started making binary models with STARS code to do population and spectral synthesis. We found that same thing but made models publicly available. Basically, we showed that binaries improve agreement with observations for everything!
- Binary important sealed in 2012 thanks for Sana, de Mink et al. (2012, Science).
- Since GW150914 everyone wants to work on binaries....
- To learn more see:
de Marco & Izzard (2017, PASA) and Eldridge, Stanway et al. (2017, PASA).

STELLAR EVOLUTION MOUNTAINS

Credit: Giuliano Iorio, DEMOBLACK ERC

Let's talk about
binary stars...

Red giant/supergiant

Main sequence star

Planetary nebula
or
Supernova

White dwarf,
Neutron star,
Black hole

Red giant/supergiant

Main sequence star

Planetary nebula
or
Supernova

White dwarf,
Neutron star,
Black hole

Roche lobe overflow

Contact binary

Contact binary with L2/3 overflow

(examples found recently by Ylva Götberg & Maria Drout)

Wolf-Rayet stars,
Helium stars

Merger
(weird main
sequence star?)

Red giant/supergiant

Main sequence star

Planetary nebula
or
Supernova

White dwarf,
Neutron star,
Black hole

Roche lobe overflow

(examples found recently by Ylva Götberg & Maria Drout)

Common envelope
evolution

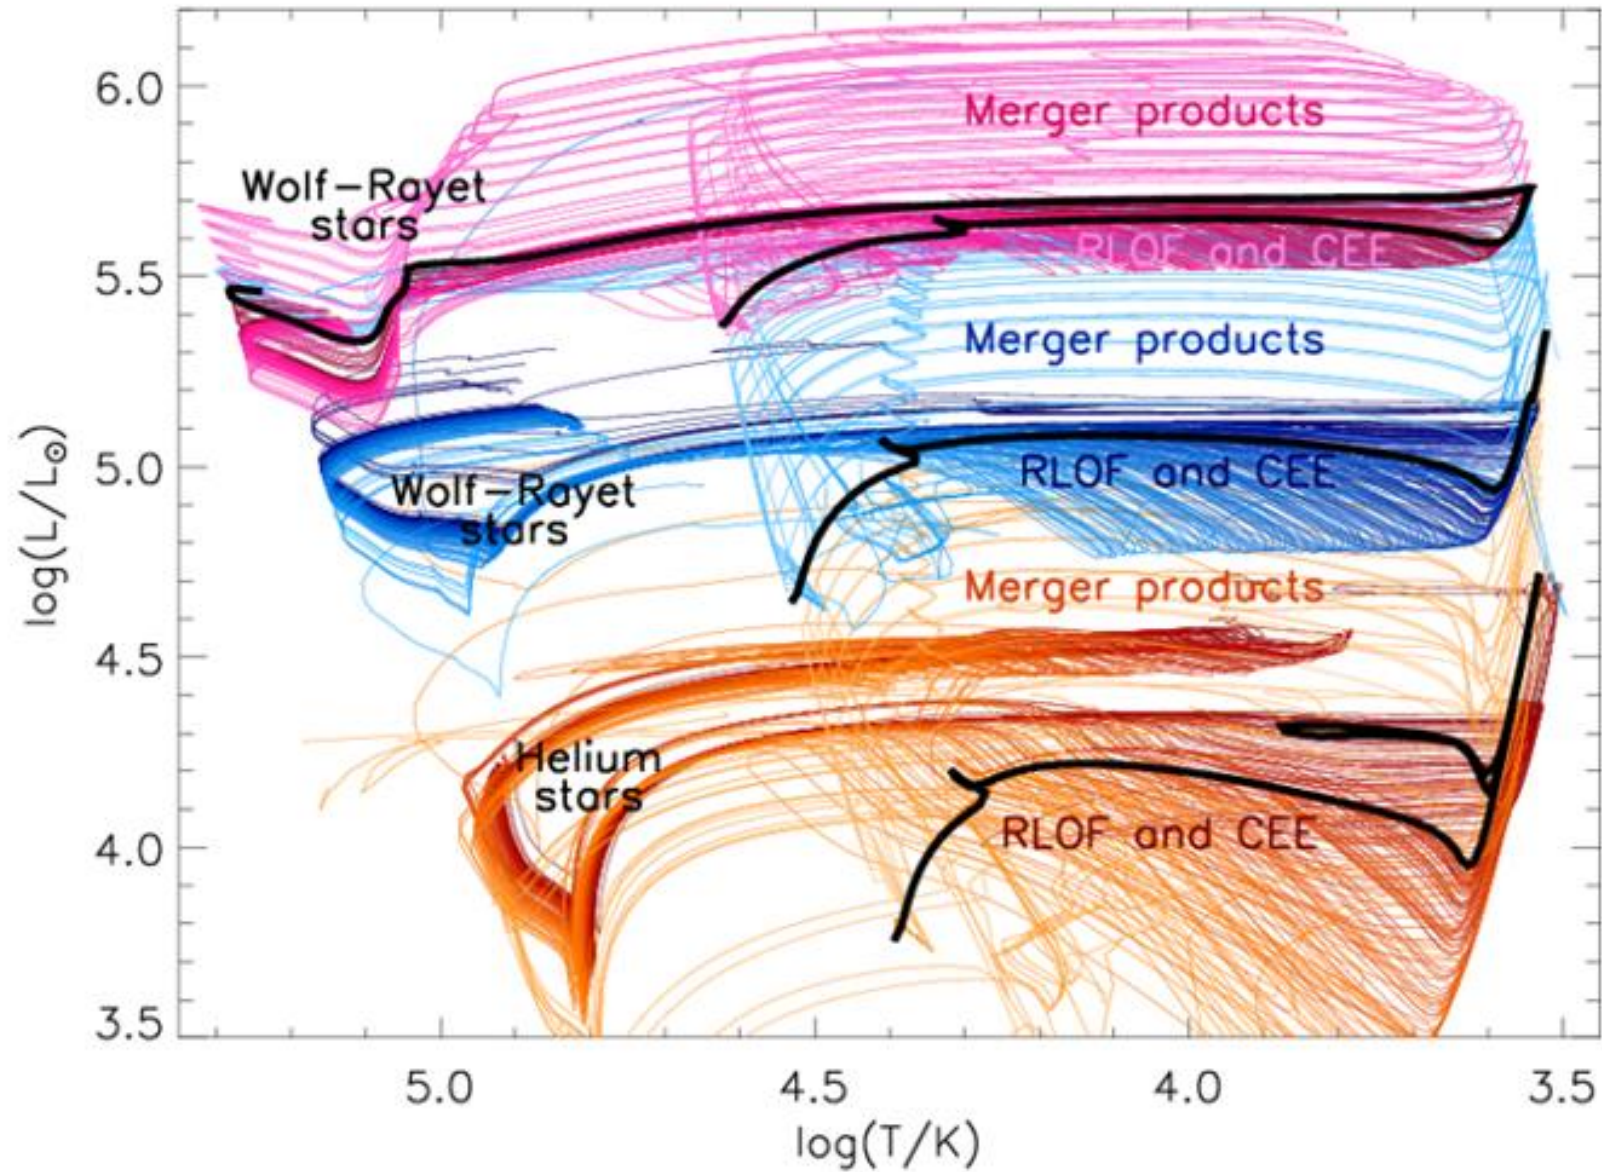

Wolf-Rayet stars,
Helium stars

Merger
(weird red
giant?)

On the **HR** diagram...

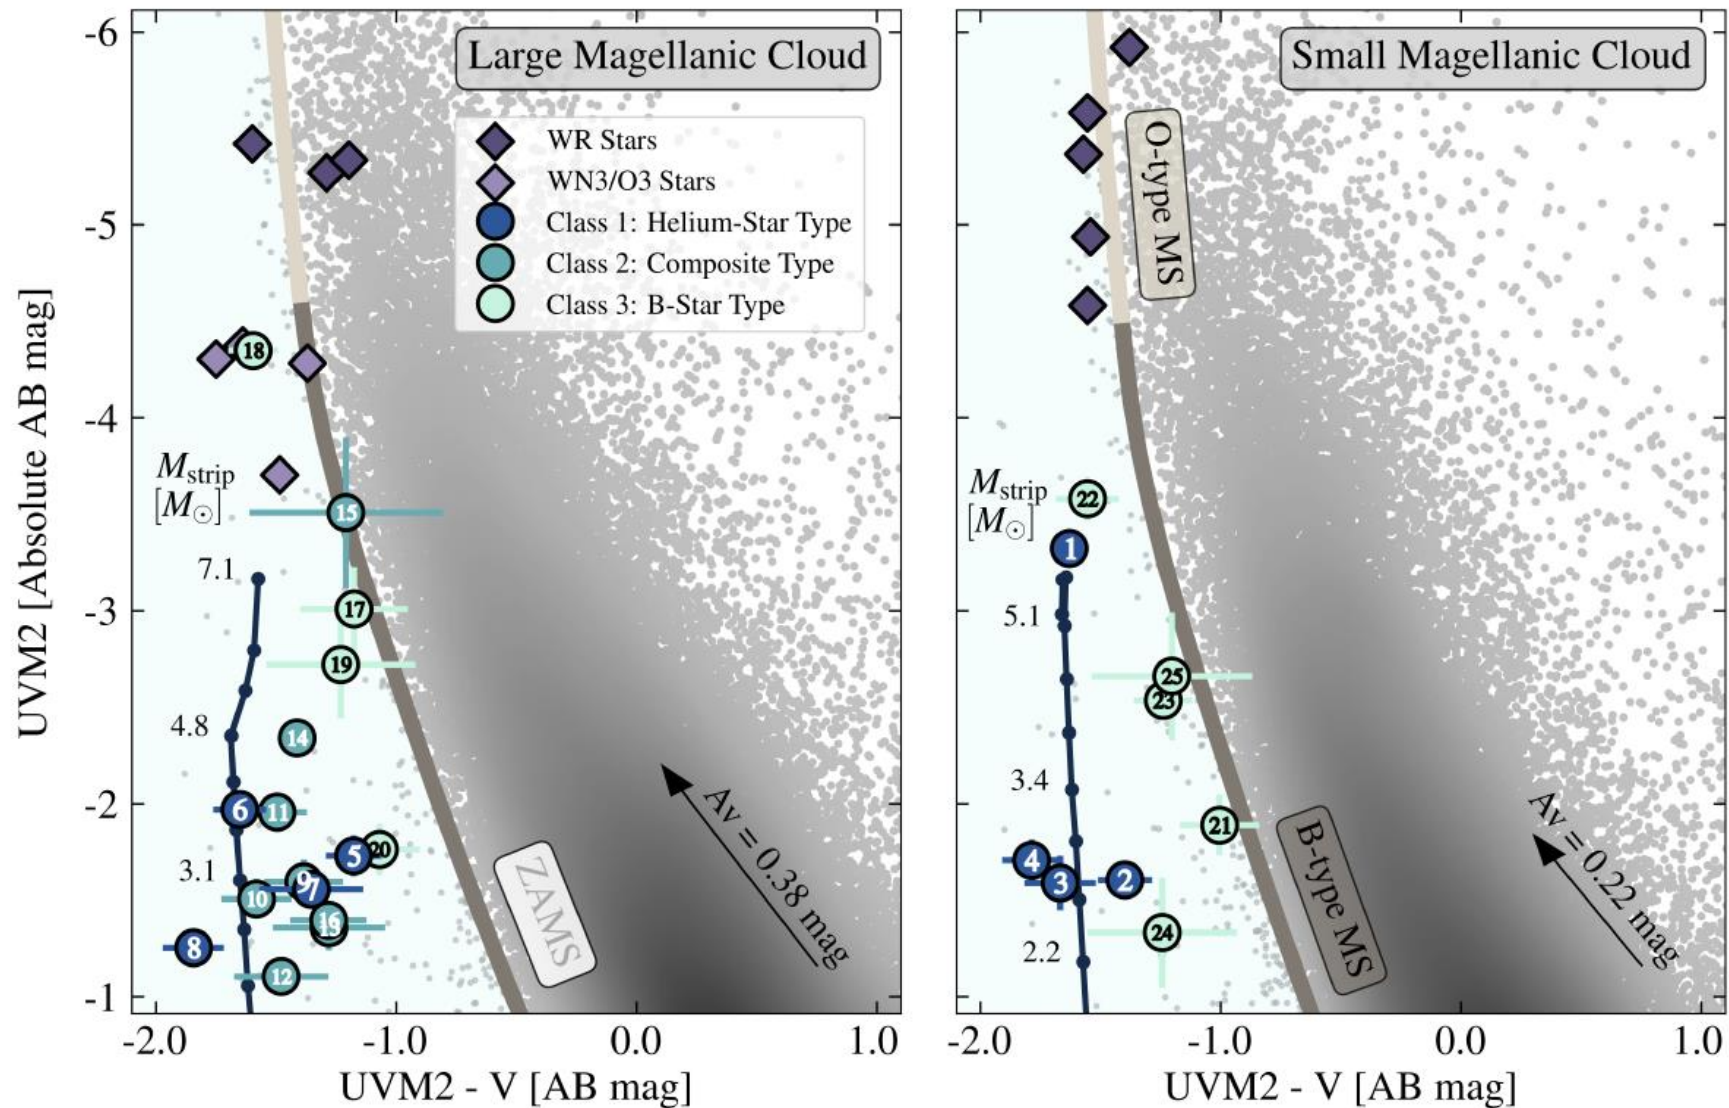

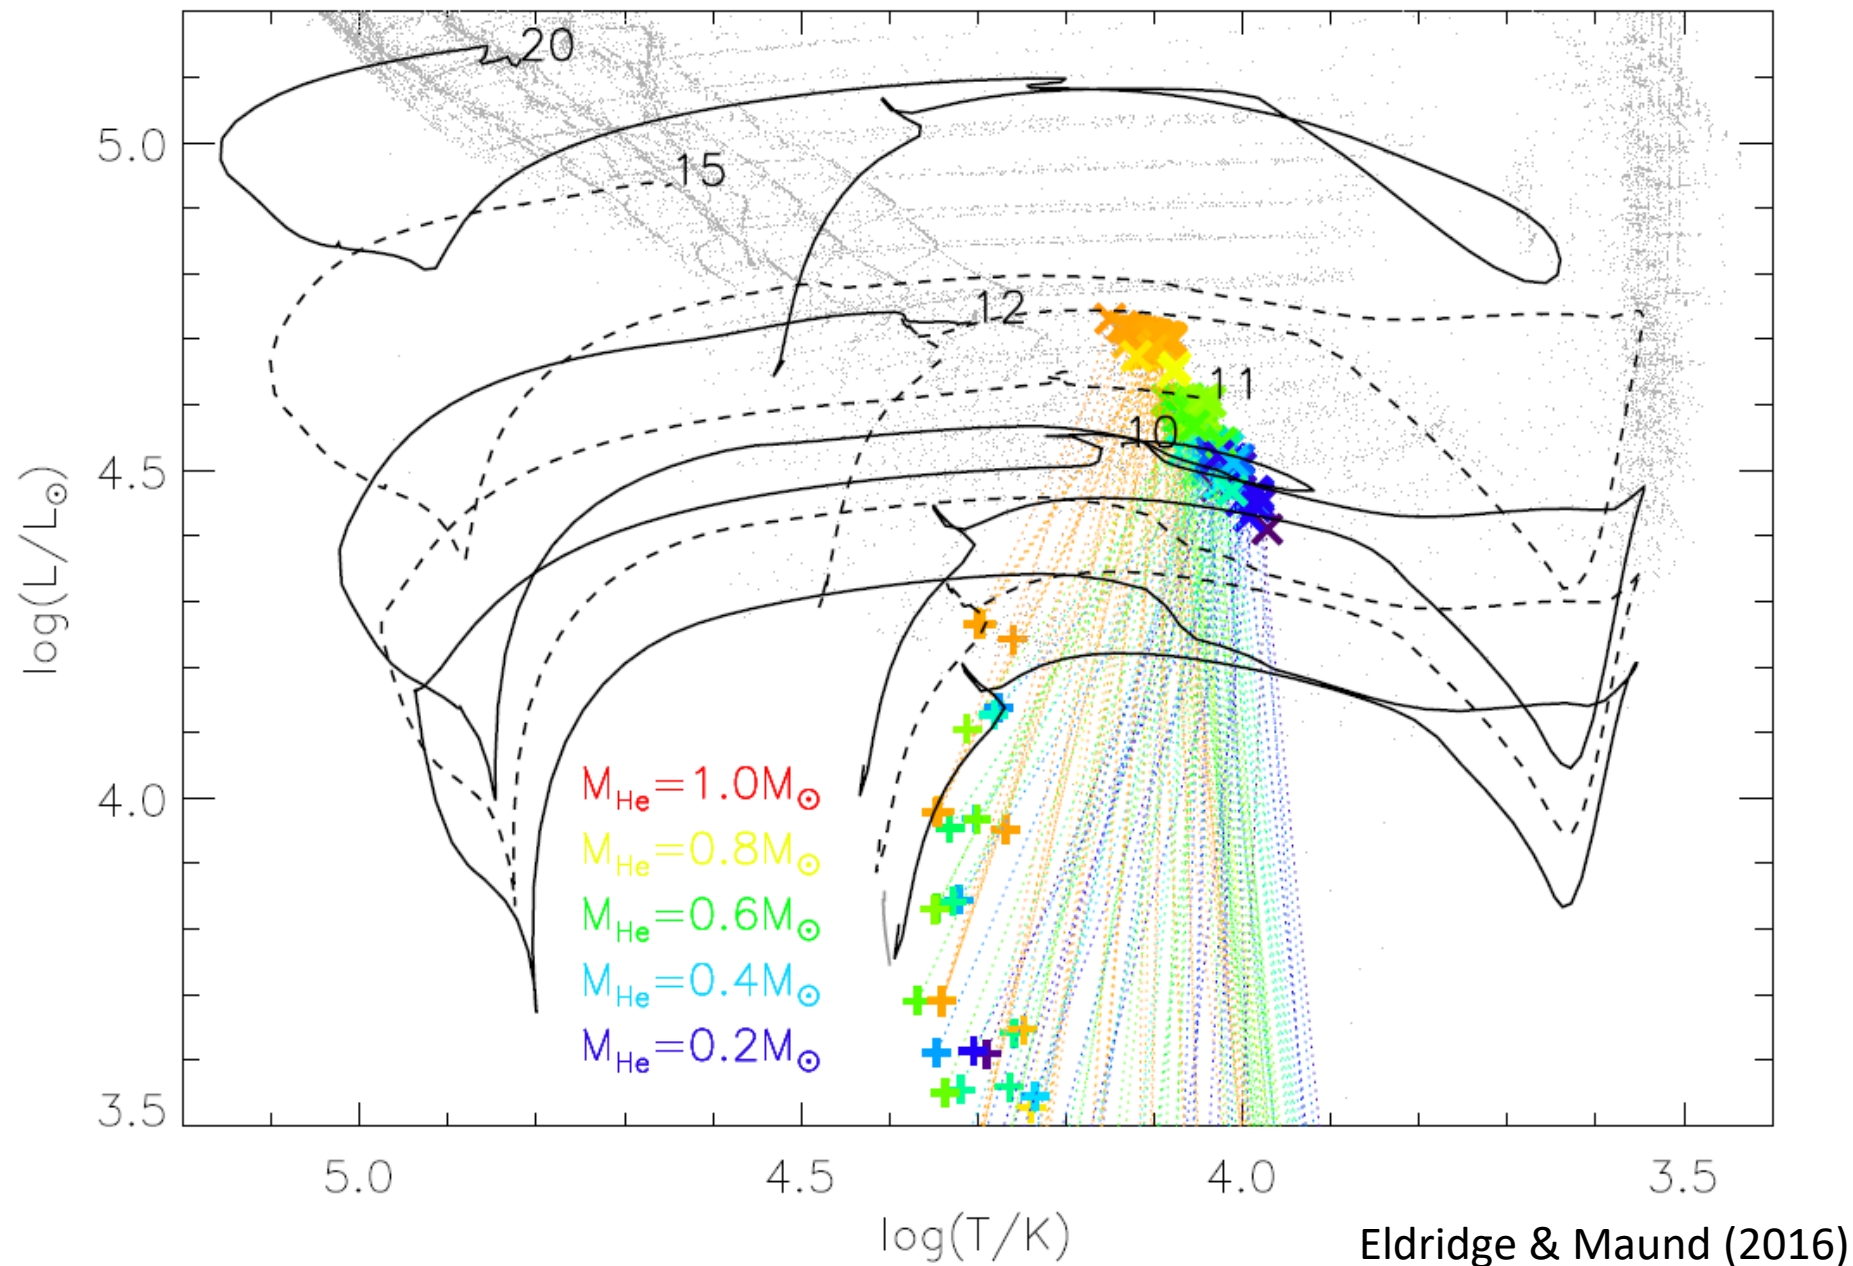

Figure 1: Identification of Candidate Stripped Helium Star Binaries in UV-optical Color-Magnitude Diagrams.

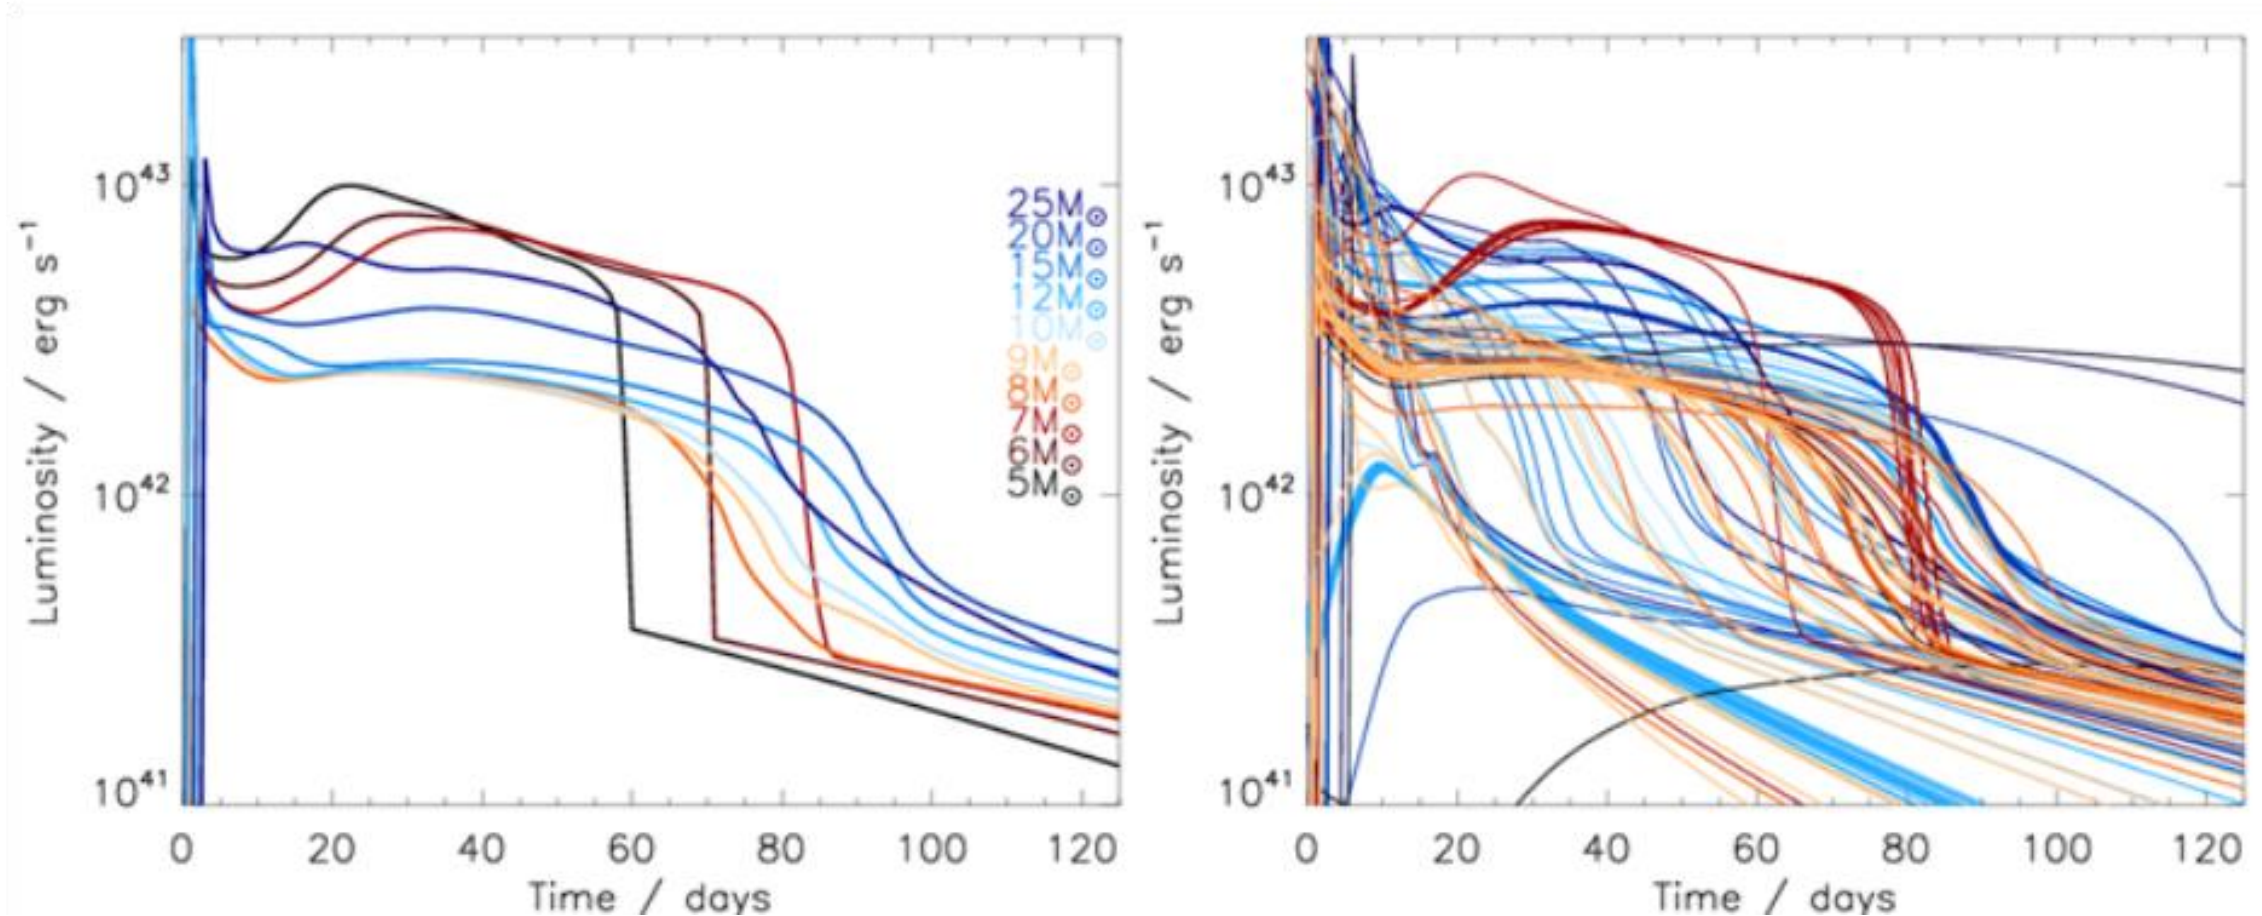

**So what do helium stars
from binaries do...?**

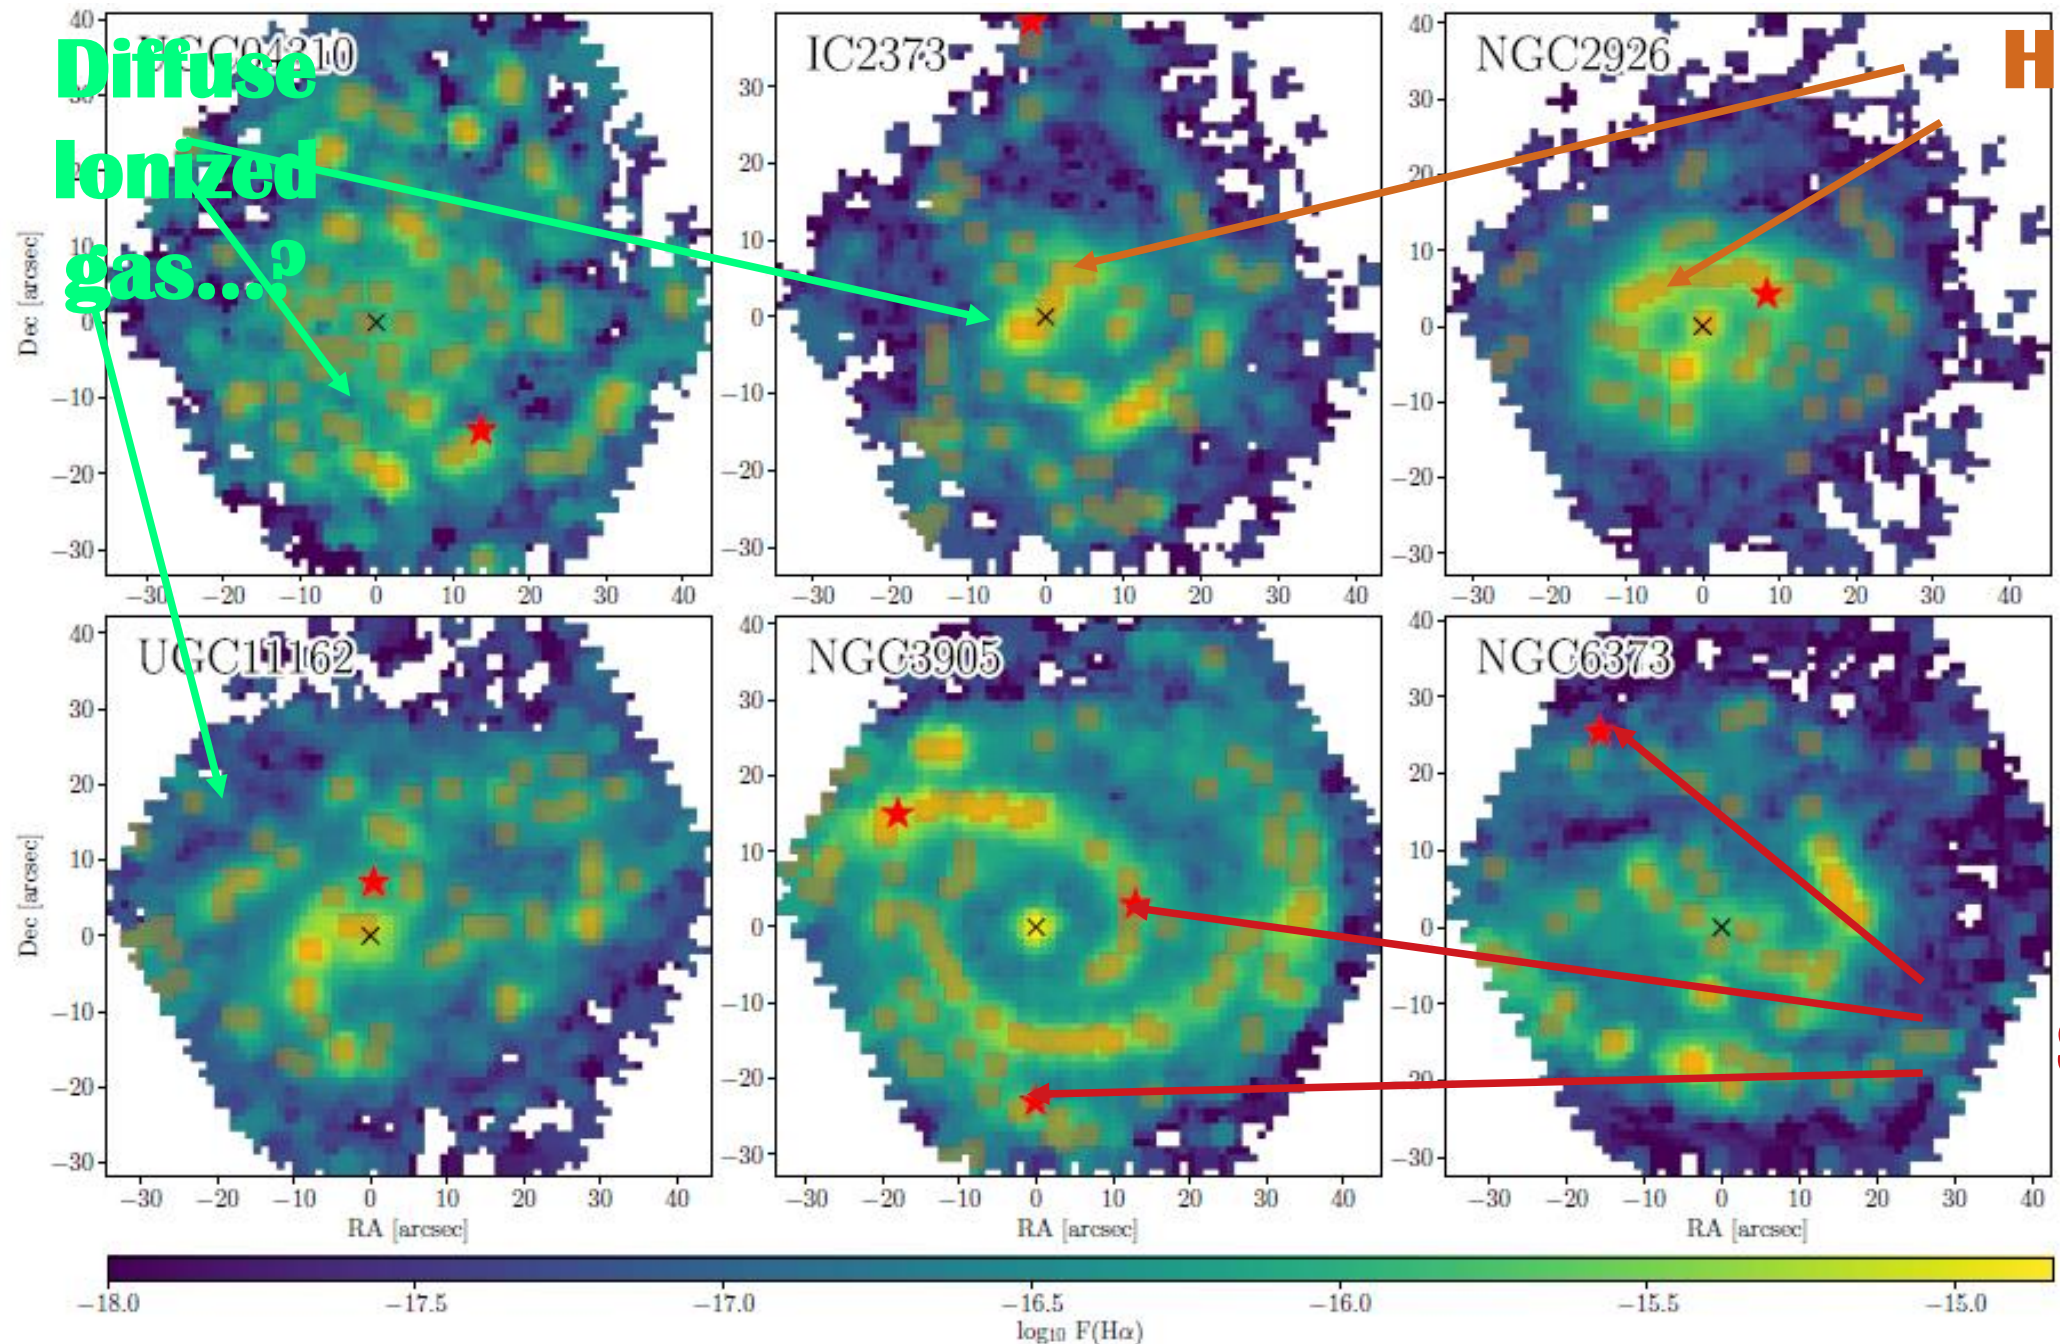

Type Ib SNe iPTF13bvn

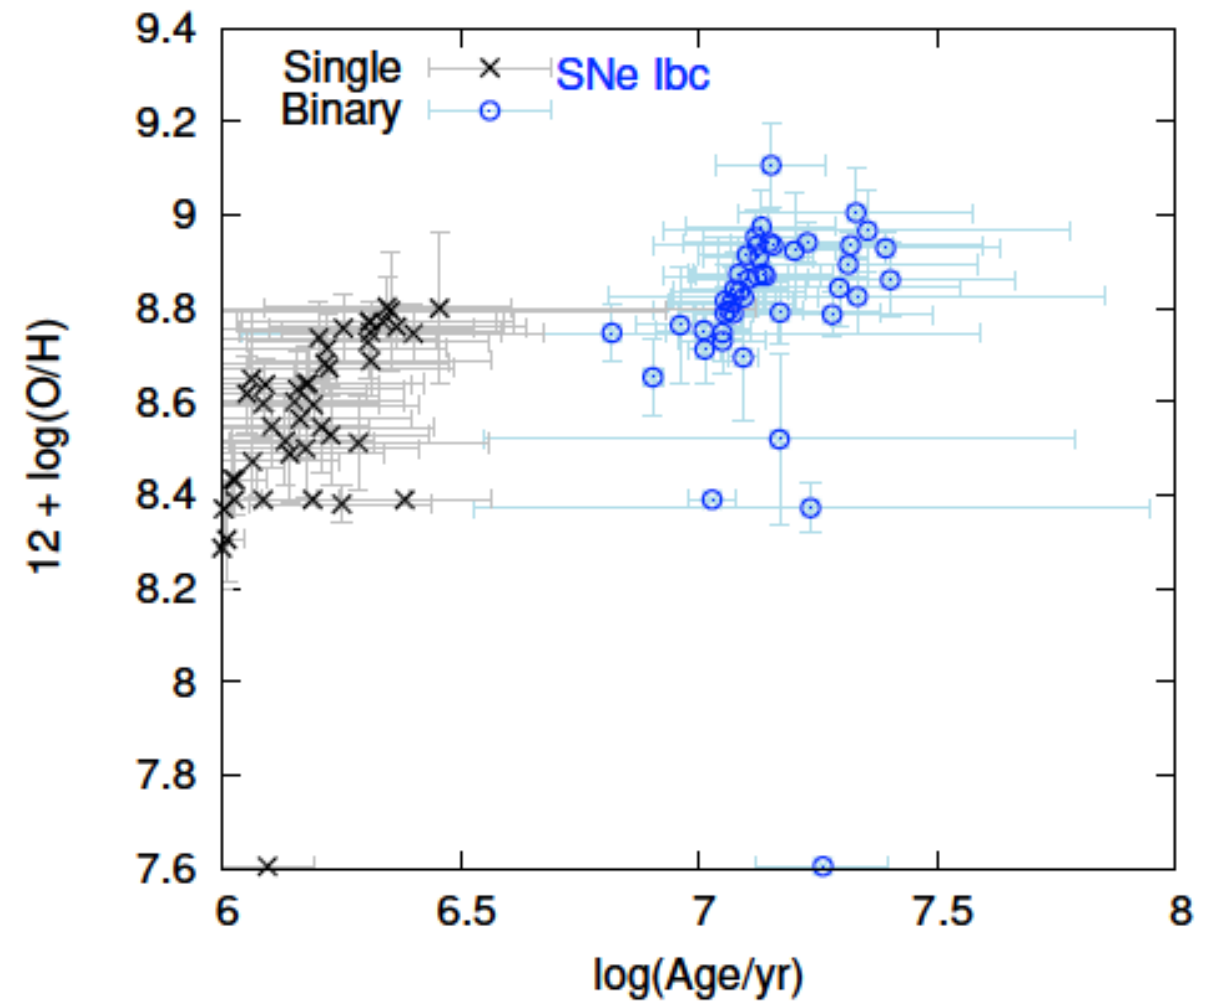

Type II SN lightcruves from interacting binaries

Galbany et al. (2018) - "PISCO: The PMAS/PPak Integral-field Supernova Hosts Compilation".

BPASSv2.1

Xiao et al . (2018, 2019) and see works by Götberg et al. and Zapartus et al..

More things binary stars “do” ...?

- Type Ib/c supernovae.
- Produce the ionizing photons for re-ionization.
- Type Ia supernovae.
- Blue stragglers.
- X-ray binaries.
- GW transients (although dynamical formation channels exist).
- Most of the weird objects in the Universe (unless they're triples)....

LAB 1 – Looking at the Donors!

- Main aim to observe in the models the different evolution the mass loss by Roche lobe overflow.
- Compare a few different models on your tables.
- Remember: before lunch, set both stars evolving in detail to get the accretor model for Lab 2.
